Project Initialization and Planning Phase

Date	03 October2026
Team ID	SWTID-2026-3644
Project Name	Implement Client Script & UI Policy (incident)
Maximum Marks	Marks 3

: Define Problem Statements (Customer Problem Statement)

ServiceNow users need to create and manage incident records accurately and efficiently. The project uses Client Scripts and UI Policies to control form behavior, validate user inputs, and dynamically display or make fields mandatory, read-only, or hidden based on incident conditions. Client Scripts execute client-side logic, while UI Policies apply form changes without requiring complex scripting. These features help ensure that incident information is entered correctly, improve data consistency, and reduce user errors.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An IT support agent managing incident records in ServiceNow	Create and update incident records accurately and efficiently.	Users may leave required fields empty or enter incomplete incident information.	Incident forms need validation and dynamic field control using Client Scripts and UI Policies.	Confident that incident records are complete, consistent, and managed correctly
