Solution Requirements

Date	**03 October 2026**
Team ID	SWTID-2026-3644
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create the requirements for implementing Client Scripts and UI Policies in the ServiceNow Incident table to improve form validation, field visibility, mandatory fields, and user experience.

- **Functional Requirements (FR)** define the functions the solution must perform.
- **Non-Functional Requirements (NFR)** define how reliably, securely, and efficiently the solution should operate.

Fill out the requirements and acceptance criteria for the project.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users must access ServiceNow with authorized accounts before creating or modifying incident records.	High
2	Authorization levels	Only authorized users can create, update, and manage incident records according to their roles.	High

3	Client-Side Validation	Client Scripts must validate incident form fields and display appropriate error messages when invalid data is entered.	High
4	Field Visibility	UI Policies must show or hide relevant incident fields based on selected field values.	High
S.No	**Requirement Category**	**Requirement Description**	**Priority (High/Medium/Low)**
5	Mandatory Fields	UI Policies must make required fields mandatory based on incident conditions, such as setting the Assignment Group when an incident is assigned.	High
6	Data Validation	Client Scripts must prevent form submission when required conditions are not satisfied, such as entering an invalid short description.	High
7	Business Rules and Conditions	UI Policies must apply defined conditions automatically when users create or update incident records.	High
8	Other	The solution should support incident creation and updates while providing clear validation messages and consistent form behavior.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Metric / Acceptance Criteria
5	Usability & Accessibility	Incident forms should be easy to use, with clear messages and appropriate field visibility.	Users can complete incident forms without confusion about mandatory fields or validation errors.
6	Other	Client Scripts and UI Policies should be easy to modify and maintain.	Administrators can update scripts, conditions, and field settings without redesigning the entire incident workflow.

S.No	NFR Category	Requirement Description	Metric / Acceptance Criteria

1	Performance & Speed	Client Scripts and UI Policies should execute without unnecessary delays.	Form fields respond promptly when users change field values.
2	Scalability	The configuration should support multiple incident records and users.	The solution works for new and existing incident records without changing the overall workflow.
3	Security & Data Privacy	Incident information must be accessible only to authorized users.	Users can access or modify records only according to their assigned roles and permissions.
4	Reliability & Availability	Client Scripts and UI Policies should work consistently during incident creation and updates.	Configured validation, visibility, and mandatory-field conditions work as expected.
