Technology Stack

Date	03 October 2026
Team ID	SWTID-2026-3644
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	Marks 2

:Define Your Technology Stack

Identify the ServiceNow platform components, client-side scripting tools, UI policies, incident table, and form validation features used to implement Client Scripts and UI Policies in the Incident Management module.

The table below lists the technologies and ServiceNow components used for client-side form customization, field validation, dynamic visibility, mandatory field control, and incident record management.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	ServiceNow Web UI	Provides the user interface for creating, viewing, and updating incident records .
2	Backend / Server-Side	ServiceNow Platform	Processes incident records, stores data, and supports client-side configurations through the platform.
3	Database / Data Storage	Incident Table (incident)	Stores incident information such as Short Description, Caller, Category, Priority, State, and Assignment Group.
4	Cloud / Hosting/ Deployment	ServiceNow Cloud Platform	Provides the hosted environment for incident management, Client Scripts, UI Policies, and form customization.

5	Client-Side Scripting / Form Customization	JavaScript, Client Scripts & UI Policies	Uses JavaScript to validate user input and Client Scripts and UI Policies to control field visibility, mandatory status, and read-only behavior dynamically.

6	Third-Party APIs / Other Tools	ServiceNow Form Designer / Incident Form	Supports form configuration and testing of Client Scripts and UI Policies to improve the incident creation and update process.

6	Third-Party APIs / Other Tools	Microsoft Excel / Spreadsheet	Provides the employee data source that is uploaded to ServiceNow for staging, transformation, validation, .and import
