Project Title	Implement Client Script & UI Policy (Incident)
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to improve incident management in ServiceNow by implementing Client Scripts and UI Policies. Client Scripts are used to perform client-side actions such as validating form inputs and displaying alerts, while UI Policies dynamically control field visibility, mandatory status, and read-only behavior based on specified conditions. This solution improves data accuracy, simplifies incident form handling, and ensures users provide the required information.

Project Overview	
Objective	To implement Client Scripts and UI Policies in ServiceNow Incident Management to validate user inputs, control field behaviour dynamically, and improve the accuracy and efficiency of incident record creation.
Scope	The project covers creating Client Scripts, configuring UI Policies, validating incident form fields, dynamically making fields mandatory or read-only, controlling field visibility, and testing the behavior on the Incident form.
Problem Statement	
Description	Manual incident record creation may result in incomplete information, invalid field entries, and inconsistent data. Users may forget to enter important details such as Short Description, Caller, Category, or Priority, which can affect incident tracking and resolution.
Impact	The proposed solution reduces incomplete incident records, improves data validation, ensures required fields are filled, and provides a user-friendly interface for incident management.
Proposed Solution	
Approach	Create Client Scripts and UI Policies on the ServiceNow Incident table. Configure Client Scripts to validate form inputs and display alerts when necessary. Create UI Policies with specified conditions to dynamically make fields mandatory, visible, or read-only. Test the configurations to ensure they work correctly when users create or update incident records..
Key Features	-Client Scripts for client-side validation of incident form data. - UI Policies to dynamically control field visibility. -Automatic mandatory-field settings based on specified conditions. -Read-only field control to prevent unwanted modifications. -Alerts and validation messages for incorrect or incomplete inputs. -Improved accuracy and consistency of incident records. -Testing of Client Scripts and UI Policies on the Incident form.

Resource Requirements

Resource Type	Description	Specification / Allocation
• **Hardware**	Computing resources	Laptop / Desktop
• **Memory**	RAM specifications	Minimum 4 GB RAM
• **Storage**	Disk space	10 GB available storage
• **Software**	Platform	ServiceNow Developer Instance
• **Frameworks**	Development platform	ServiceNow Platform
• **Languages**	Client-side scripting	JavaScript
• **Development Environment**	IDE / Interface	ServiceNow Studio / Platform UI
• **Application**	Target module	Incident Management
• **Data**	Source and format	Sample Incident records in ServiceNow
