Project Executable Files

Date	03 October 2026
Team ID	SWTID-2026-3644
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No.	Item to Submit	Status
1	Complete source code / configuration files	Yes
2	README / Setup Guide	Yes
3	requirements.txt / package.json	NA
4	Database schema / seed files	NA
5	Environment configuration file (.env.example)	NA
6	Deployed application URL	Not provided
7	APK / Executable binary	NA

8	Dockerfile / Containerization config	NA
9	Test files and test results	Yes
10	Demo video or walkthrough	Not provided

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
Client Script & UI Policy (Incident)
|
├── Client Scripts
|   ├── on Load Client Script
|   └── on Change Client Script
|
├── UI Policies
|   ├── UI Policy Conditions
|   └── UI Policy Actions
|
├── Incident Table
|   └── Incident Form
|
├── Test Cases
|   └── Test Results
|
└── README / Setup Guide
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not provided — ServiceNow development instance
Login Credentials (Demo)	To be provided by the project team
Platform / Hosting Provider	ServiceNow development instance

Repository Link	Not provided — ServiceNow configuration project
Demo Video Link	Not provided

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

1. Log in to the ServiceNow development instance.
2. Navigate to System Definition → Client Scripts.
3. Create a Client Script for the Incident table.
4. Configure the script to validate incident form fields or display messages based on user input.
5. Navigate to System UI → UI Policies.
6. Create a UI Policy for the Incident table and define the required conditions.
7. Add UI Policy Actions to make fields mandatory, read-only, or visible based on the conditions.
8. Open the Incident form and test the Client Script and UI Policy.
9. Verify that the expected behavior occurs when the specified conditions are met.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Configuration depends on the ServiceNow instance.	Run the project in the configured development instance.
2	Client Scripts may behave differently depending on the form and script type.	Review and test all related UI Policies.
3	UI Policy conditions may conflict with other existing policies.	Attach actual ServiceNow screenshots and measured results before final submission.
4	Deployment URL and demo credentials are not provided.	Obtain access details from the project team.
5	Test screenshots and results are not attached.	Capture actual screenshots and test results before submission.
